Upgrading Edition of J60950 Standard From H16 To H19

METI amended J60950 (H16) on September 18, 2007 by adding requirements for paper shredders. This action was to prevent amputation accidents reported recent years involving children. New edition is J60950 (H19). Both H16 and H19 are harmonized with IEC60950 (1999) 3rd Ed.

DENAN certificate issued prior to September 18, 2007 per H16 edition is valid until it expires. In this case, manufacturers must confirm that applicable DENAN products comply with H19 edition. Except for paper shredders, products with H16 edition certificate shall fulfill H19 edition requirements.

Even allowed by the law, H16 DENAN certificate may cause confusion and mislead your customers. To eliminate unnecessary confrontations and missteps, we offer certificate upgrade service for UL and UL affiliate issued DENAN certificate with minimum cost and turnaround time. For further details, please contact DENAN staff.
